Tad.

TAD brings technical expertise to any project by bridging AEC processes including real estate planning, facilities, network security, and AV.

TAD's project management service is designed to support client staffing structures to improve cost, calendar, and coordination outcomes. Our multidisciplinary knowledge allows us to coordinate various vendors, making the complexity and intricacy of technical design more immediate and approachable.

Key Activities

STRATEGIC PLANNING
- Inform real estate and facility planning on AV/IT
- Provide change management and operational plans
- Evaluate enterprise platforms

PROJECT EXECUTION
- Oversee AV, architectural, and systems design and integration
- Utilize TAD's centralized design database and monitoring

PROJECT GOVERNANCE
- Manage individual or multiple enterprise projects from design through deployment as AV designer or as client representative to third parties

RESOURCE MANAGEMENT
- Complement existing staff structures with new expertise
- Support through time-tested tools and processes

How to Engage

We begin by discussing workflow gaps and pain points, from which we can define the right solution for the client. Some examples of common engagements include:

TECHNOLOGY PMO

TAD applies our PM process and subject matter expertise to a specific project or projects, supplementing the design team to ensure alignment and successful design and implementation.

DEDICATED EMPLOYEE

TAD assigns a team member(s) to work exclusively for one client to oversee delivery of a portfolio of work, this single point of contact across projects improves consistency, efficiency, and turn around times.

EMBEDDED FTE

TAD acts as a staffing agent to hire a technical team member that will be onboarded by the client, as a contractor, to fill their staffing needs. TAD maintains the hire's administration while the hire maintains access to TAD's various practices for support.
